B4NZ is the UK country chapter of the NZBA, which is part of UNEP FI and GFANZ.

Perseus
Steering Group
05 June 2023
Perseus vision and mission

VISION
Unlock financial support for SMEs to address up to 50% of UK emissions

MISSION
Enable banks and industry to unlock incentives and reduce risks with open standards and assurable data

OUTCOMES
1. Convene and represent actors from across the market that will pilot a UK-wide programme to support SMEs.
2. Build a demonstrator to automate greenhouse gas (GHG) reporting for small and medium enterprises (SMEs) and improve access to environmental, social, and governance (ESG) data, and engage with SMEs to deliver Net Zero outcomes.
## Success criteria for 2023 to deliver the ‘Perseus Framework’

1. **Do one thing well: build a demonstrator for COP28**

   Enable assurable data to flow **automatically**
   from the **real** economy (energy companies)
   to the **financial** economy (banks)
   with the permission of the **customer** (SME)

   while improving the **quality** and **impact** of outcomes for stakeholders

2. **Go far together: build the process with Advisory Groups (AGs)**

   AG1 Enable prioritisation of actions that **link disclosure to measurable impact**

   AG2, AG3 Address the technical and legal implementation challenges

   AG4 Agree on cohesive communications

   AG5 Identify potential policy interventions
Outcomes: design elements towards implementation of a market-wide solution

<table>

Dear Heather,

Thank you for your letter of 3 March, addressed to the Secretary of State, regarding your work on Project Perseus. I am responding as this matter falls under my Ministerial portfolio. I apologise for the delayed response.

I would like to congratulate you and the Bankers for Net Zero team for developing a solution to a highly complex and important issue. The Government recognised the significance of UK small and medium-sized enterprises (SMEs) in the Mobilising Green Investment: 2023 Green Finance Strategy, and appreciates the importance of both supporting SMEs to decarbonise and reducing disproportionate reporting burdens.

Project Perseus epitomises the kind of net zero leadership we want to see from the business and finance community. I feel it will be a valuable contribution to the UK’s transition, and would like to offer my full support. In the recent inaugural Net Zero Council meeting we committed to establishing a cross-cutting working group to champion SMEs across the financing and business sector roadmap delivery groups. Martin McTaggert of the Federation of Small Businesses agreed to lead this working group, and my office is happy to connect you to the group to ensure that Project Perseus is represented.

Additionally, please find attached my letter to CEOs on behalf of the project. I hope this helps convey the opportunity net zero presents for recipients to become leaders in delivering net zero. My office will liaise with you to ensure the letter is sent without delay.

In the meantime, please do not hesitate to communicate other ways the Government can help to accelerate or amplify Project Perseus.

Yours sincerely,

Rt Hon Graham Stuart MP
Minister of State for Energy Security and Net Zero

---

"We plan to showcase the work thus far and the pilot at COP28, and will work with programme partners as it progresses. I look forward to receiving your cooperation and showcasing UK leadership on delivering net zero."
To go far, we go together — Steering & Advisory Groups

Icebreaking assembles Advisory Groups under a Steering Group to address the foundations of data governance.

**Steering Group**

**ROLES:** Provide governance, strategic and tactical leadership, and oversee market-wide communications. Appoint and direct Advisory Groups. Discuss, review and ratify plans.

Advisory Group 1 (AG1) — Users, Needs, Reporting, Impact

Questions addressed by AG1

Does this:
- a. help unlock access to net zero finance for SMEs?
- b. reduce risks for users?
- c. bring efficiency to users?
- d. help users to identify opportunities for energy efficiency?

For each of these questions, we aim to address
- a. If not, why not?
- b. If so, why and at what scale?
- c. What are blockers, incentives, opportunities (e.g. benchmarking)?

“I personally found the session really effective, focussed and mission-led.

We have an enormous opportunity to create a powerful impact in the fight against climate change if we get it right.

The challenge of the task at hand and the importance of achieving a net zero economy makes it a very exciting endeavour.”

Leon Jayasinghe, Partnerships Manager, Tide
AG1 — Users, Needs, Reporting, Impact (DRAFT)

**USERS**

Users are defined as:
- Banks
- SMEs
- Asset managers
- Third parties (e.g. accountants, accountancy software firms, carbon accountants, auditors, consultants and advisors)
- Primary data providers (e.g. energy companies, utilities, smart meter providers, national grid, asset managers)
- Government and regulators (DESNeZ, Ofgem)
- Standards bodies (e.g. PCAF, ISSB)
- Reporting bodies and users of outputs (e.g. CDP, LSEG, Bloomberg)

**DATA NEEDS**

For *electricity* we want to know, for each user, what specific data is needed, at what level of resolution. For example:
- Spend
- kWh
- kgCO2e (including methodology, supplier, time-resolution)
- Time resolution (e.g. annual, quarterly, monthly, 30-minute, bill-based, smart meter) and aligned with reporting needs vs impact incentives and recommendations
- Source (e.g. retailer, landlord, smart meter, aggregator, third party, reserve capacity, power factor, national grid, tariffs)
- Asset resolution (e.g. company, primary asset, sublet)
AG1 — Users, Needs, Reporting, Impact (DRAFT)

**REPORTING NEEDS**

Identify what the reporting needs are for each user, related (as a starting point) to electricity.

For example:
- Which reporting framework is being used? (e.g. PCAF, TCFD, ESOS)
- Which emission reporting models / methodologies are being used? (e.g. GHG protocol)
- What emissions factors / algorithms are being used (e.g. national grid, supplier-source, Defra, DESNeZ)

**IMPACT NEEDS**

- What impact or influence does assurable electricity data make to the risk profile of reporting on lending (Scope3 cat 15)?
- What impact or influence does continuous access to these data have on the risk profile of lending and other financial products and incentives (e.g. tax incentives)?
- What impact or influence does access to assurable data have on reporting and standards? (e.g. PCAF, TCFD, ISSB)
- What impact or influence does access to assurable data have on regulation and policy? (e.g. DESNeZ)
- What impact or influence does access to assurable data have on users of reporting data? (e.g. CDP, LSEG)
- And, combined, what is the impact of these and/or influences on SMEs?
**AG2 — Data and Smart DCC**

Smart DCC and RECCo can provide access to all data points needed to secure the highest scores under the PCAF accounting framework.

<table>
<thead>
<tr>

</tr>
</tbody>
</table>
Overview of the steps in development

**Step 1 (2023)**
Work out the **business case(s)** to **unlock financial incentives** and **reduce risk** for GHG reporting (AG1).
Lay foundations for **automating** assurable, primary data flow to reflect energy usage on a geographic and temporal basis.

**Step 2 (2023)**
Address the **legal, policy** and **technical** challenges (AG2, AG3, AG5) to enable the process to scale to the whole economy.
Test market **engagement** and incentives through clear, cohesive **communication** around a demonstrator (AG4)

**Step 3 (2024)**
Based on the needs identified:
1) increase the **scope** of data to other impact categories (e.g. water, transport) as defined by users.
2) improve **related** data (e.g. reporting, risk, temporal, sector and geographic issues) as defined by users.

Values — we enable

**Openness**

1. share our views and plans, and share knowledge as widely as possible;
2. solicit and listen to views from end users and stakeholders;
3. make our outputs available under an open licence (e.g. CC-BY, OGL).

**Expertise**

1. bring our expertise to the discussion as individuals;
2. use our expertise to synthesise the views of others in constructive and forward-thinking proposals;
3. use good judgement to respect privacy and confidentiality.

**Collaboration**

1. support each other in discussion, in decisions, and in delivery;
2. constructively hold each other to account on our commitments;
3. ensure all voices are heard and considered carefully.
Roles: a strong coalition to deliver commercial and public impact

A coalition of government, non-profit and commercial members can deliver this ambitious programme

Programme development roadmap — Advisory Groups & Implementation

### Advisory Groups

- **AG1: User Needs, Materiality, Impact**
- **AG2: Data Publishing**
- **AG3: Data Licensing**
- **AG4: Engagement & Communications**
- **AG5: Policy**

### Q1 (Feb, Mar)

- Stakeholder outreach and recruitment for AGs
- Identify organisations, capabilities; onboard.
- Customer journey defined
- Demonstrator detailed planning
- Convene Advisory Groups

### Q2

- Detailed requirements mapped across AGs
- Detailed legal, technical, ux, comms and operational design
- Linked collaboration requirements and dependencies across AGs resolved (e.g. data needs & licensing; materiality & communications)
- "Beyond Demonstrator" scope captured for future planning
- Demonstrator detailed design signed off

### Q3

- Detailed legal, technical, ux, comms and operational implementation
- Identification of test communities and test processes
- Roll out to test users
- Scoping of next steps beyond energy.

### Q4

- COP28, Dubai
- Launch Demonstrator results
- Communications outputs published
- Recommendations and plan for next steps
Recap — creating value across the economy

### For the UK

1. Lead the world in unlocking open markets for net zero innovation and implementation in the race to zero
2. Help catalyse the financial sector deliver incentives aimed at addressing up to 50% of UK business emissions
3. Create the underlying data infrastructure that enables cross-industry, assurable data sharing while maintaining security and user control
4. Align with Skidmore Net Zero Review and Penrose Competition Review

### For UK SMEs

1. Help unlock access to capital that will reduce SME emissions
2. Make it easy to engage (by automating GHG reporting at market-wide scale)
3. Simplify the process of engaging in, and financing, a net zero future
4. Maintain control over their data (aligned with Open Banking)
5. Create strong reputational value with their customers

### For banks, the financial sector, asset managers and beyond

1. Better manage climate risk and audit on their loan books
2. Build better relationships with, and incentives (e.g. lending requirements) for, their customers on the race to zero
3. Improve reporting and data quality (by automating delivery of assurable data from their customers) across all three scopes
4. Deliver savings by driving standardisation of approaches, addressing comparability, market cohesion and maintaining customer agency
5. Create strong reputational value with their customers

### For energy companies, low carbon technology solutions, carbon accounting applications and auditors

1. Automate access to assurable data at market-scale
2. Enable predictive modelling and analysis at regional, sectoral and granular levels
3. Match financial incentives and low carbon technologies with those who need them
4. Create strong reputational value with their customers
Data flow that represents materiality

Perseus — Implementation Example — what might this look like for a user?

1. **Automate** carbon footprinting in a **free** national programme

You may qualify for **net zero financial support**
For example **better interest rates** on net zero loans, save money on energy or **improved reporting** to your clients.

To assess your footprint we need **access** to your energy bill.

Click **consent** to share and start your net zero journey.
Your data will **only be used for this purpose**.
You can switch off access if you change your mind.

2. **Please validate your energy account with your energy supplier to create a secure link. You are protected by an industry standard.**

3. **Santander**

Your footprint (based on your actual energy consumed)

<table>

Trust Framework for data sharing between EnergyCo. & Bank

Trust Framework for data sharing delivers **consent management** between organisations

Organisations agree to common **terms & conditions**.

At the point of use, the **SME consents** to data sharing.

Data flows directly from **Energy Company** to their **Bank** solution/app.

Data is **not stored centrally**.

Open Energy is a non-profit **Trust Framework** that has been co-funded and developed by UK government and the energy sector, to deliver an equivalent “implementation entity” to the Open Banking Implementation Entity (which is FCA regulated).
Data is never stored centrally. The customer (SME) is always in control of their data.
